PROJECT GUIDE REVIEW & VERIFICATION CHECKLIST

Companion Review & Action Sheet for Capstone Research Manuscript
Paper Title: Oral Cancer Detection Using AI/ML and Deep Learning
Academic Context: Final-Year B.E. Computer Science and Engineering Capstone Project | October 2026

1. Author & Institutional Information (Confirmed Details & Guide Decision)

Item	Confirmed Detail in Paper	Guide Action / Confirmation Required
Student Author Byline	Rakshith Y B, Lohith R C, Keerthi A	Confirm student author listing and author order for final manuscript
Project Guide Designation	Project Guide: Aishwarya S (in review details)	Confirm designation as Project Guide (omitted from author byline)
Institution & Affiliation	Kalpataru Institute of Technology, Tiptur (VTU)	Confirm formal institutional naming for publication submission
Author Order Question	Listed as: Rakshith Y B, Lohith R C, Keerthi A	Guide to confirm final student author sequence (Lead vs. Alphabetical)
Target Publication Venue	Official IEEE Conference A4 Manuscript Style	Select Target Venue (IEEE Conf., Springer LNCS, or Dept. Review)

2. Critical Methodological & Repository Questions for Guide Guidance

No.	Verification Item & Repository Finding	Guide Action / Direction Needed
Q1	Dataset Provenance: Described as Kaggle, but exact URL and license terms are missing.	Identify source Kaggle URL and confirm if license allows academic publication.
Q2	Ethics & Consent: No IRB approval or consent records in repository.	Confirm whether external institutional ethical clearance exists or should be noted as missing.
Q3	Patient Metadata: 940 images lack patient IDs; subject overlap across splits is unverified.	Determine if patient keys exist; otherwise confirm reporting as primary limitation.
Q4	Duplicate Images: 21 duplicate groups encompassing 46 files (11 cross-partition groups with 25 files) found by SHA-256 audit.	Approve deduplication strategy to establish a properly separated, independent test set.
Q5	Training Scripts: No train.py, loss logs, optimizer, or hyperparameters in repository.	Check if original training script and logs can be retrieved from predecessor archives.
Q6	Pre-Training Weights: MergedNet backbones instantiate with weights=None in checkpoint loader.	Confirm whether backbones were pre-trained on ImageNet or initialized from scratch.
Q7	Empirical Evaluation: 99.92% accuracy was synthetic simulation; real metrics unavailable.	Authorize execution of a verified empirical evaluation script on clean test split.
Q8	Runtime Uncertainty: TTA + Monte Carlo dropout implemented in code but unvalidated.	Guide review on runtime consistency testing and calibration validation roadmap.
Q9	Publication Target: Manuscript formatted in official IEEE Conference A4 style.	Approve whether to submit to IEEE conference, Springer LNCS, or department repository.

Guide Signature & Approval: _____ Date: _____ Decision: [ ] Approved as-is [ ] Revisions Required
